

Do-While Loop: A do-while loop is similar to a while Loop in Java, except that a do-while loop is execute at least one time.

Syntax:

initialization;

do

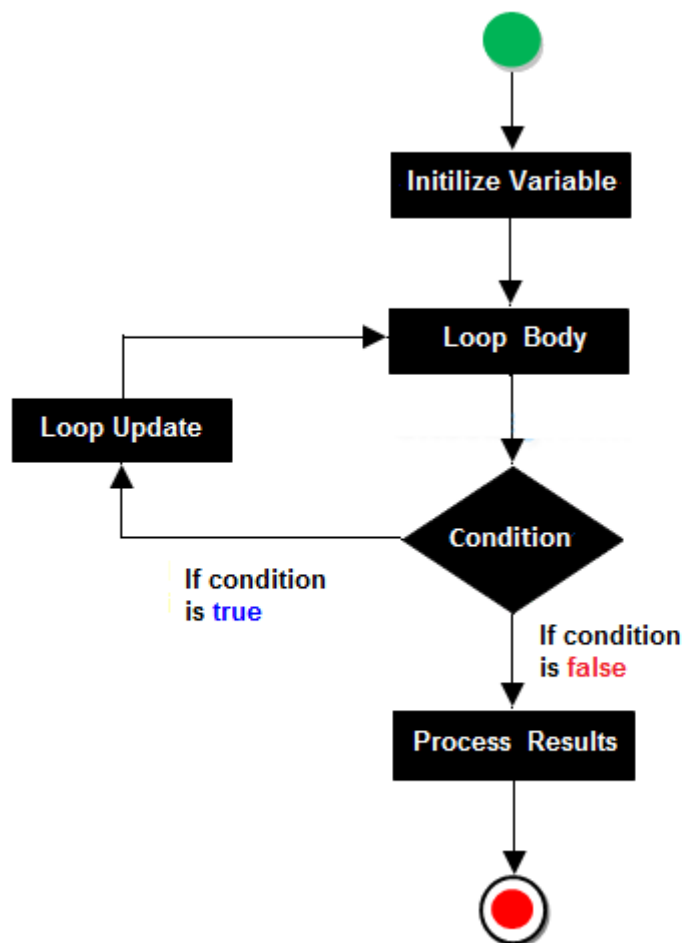

{

 print statement;

 increment/decrement statement;

}

while(condition);

A do while loop is a control flow statement that executes a block of code at least once, and then repeatedly executes the block, or not, depending on a given condition at the end of the block (in while).

When use do-while loop?

When we need to repeat the statement block at least one time then use do-while loop. In do-while loop post-checking process will be occur, that is after execution of the statement block condition part will be executed.
